

BRAIN SIGNATURE OF PAIN STUDY

HEALTHY VOLUNTEERS REQUIRED

Adults (45-85 years) **without any painful conditions** are invited to participate in research to determine brain activity changes compared to chronic knee pain population. To participate, you will need to attend

-A 90-minute session at the School of Physiotherapy for recording your brain activity using an electrode cap, undergo pain assessments and complete questionnaires.

To recognize the actual or reasonable costs involved with participating in this project, all participants will be reimbursed \$50 voucher for completing the survey and for attending the testing session.
