Migration has been a constant throughout human history. Recent DNA developments and other techniques have provided further evidence of early migratory routes. Migration has been a response to economic need, hunger, political unrest and climate change. These, combined with improved transportation, communication and global connectedness, have led to continued human movement and greater diversity. This course will also explore some of those who have migrated, the effects on them and the communities they have joined.

All speakers are staff, students or affiliates from the Centre for Global Migrations at the University of Otago.

All applications must be received by Thursday 26 January 2023. You will receive a response to your application by Monday 6 February 2023.

Please contact the Programme Secretary courses@u3adunedin.org.nz, phone 467 2594 with any queries.
